

HOW TO SELECT A COMPOSTER ?

SOME QUESTIONS TO ANSWER BEFORE COMPOSTING

How much kitchen
or garden waste is
generated per day?

Where do you
live?

Is it for your
individual home or
neighbourhood?

Do you have
pets?

What will you be
composting?

Manual or
automated?

COMPOST

BIN COMPOSTER

Size - 14 liters

Useful for
indoors

For 1kg or less
food waste/day

Safe to use with
pets around

Leachate tap

Difficult to turn
the compost

You will need
minimum
2/3 bins

Smell - if not
taken care
properly

KHAMBA

Suitable for a family of 4 to 5, can handle 1 kg of waste per day

Fits into tight spaces, you can tuck it in the corner of your terrace, garden or balcony-outdoors

Not pet friendly

Needs to be stirred manually

Requires care

TUMBLER

- 1.5 kgs to 2 kgs shredded waste per day
- Capacity is 60 liters per drum
- Takes 1 month to fill one side
- Keep rotating from outside

- 1.5 kgs to 2 kgs shredded waste per day
- Capacity is 60 liters per drum
- Takes 1 month to fill one side
- Keep rotating from outside

AUTOMATED COMPOSTER

Quantity of waste generated can range anything from 700 gms to 5 kgs

Good for homes and small offices

Can be used Indoor and Outdoor

www.youtube.com/watch?v=uTYo0JiEkCs

There is no churning, cutting or drying required. It does not require electricity

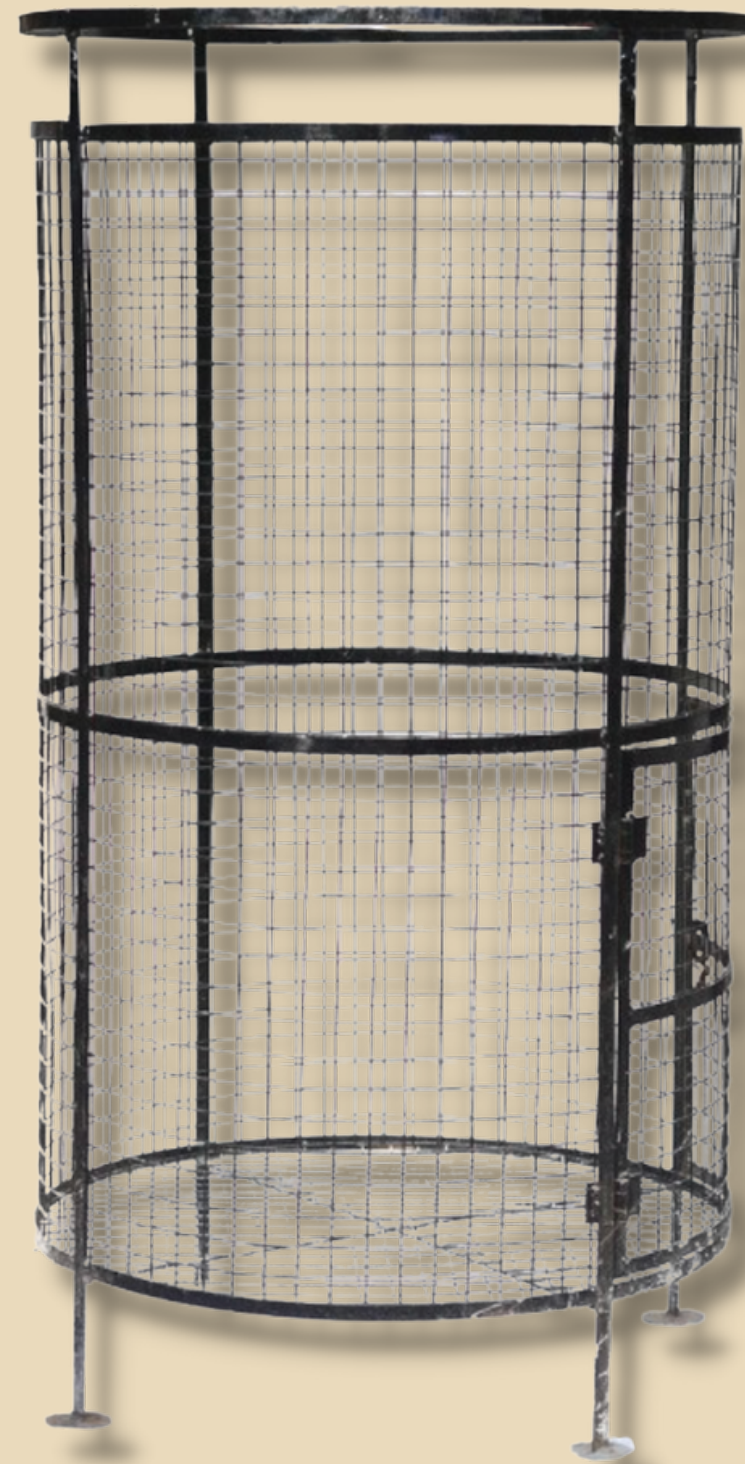

Has a separate leachate tray & compost tray

Faster compost pile within 30 days

LEAF COMPOSTOR

For garden waste including leaves, twigs, branches

Just add all your leaves & garden litter into the composter & water it daily

If you add accelerator daily, you will get your first harvest in 4-6 months. (Diluted cowdung, microbes are all great accelerators)

Make sure you install it on concrete blocks. You need water to drain off into the earth and not collect underneath
